**Abstract of the Invention**

A mini-stein bottle cover includes a bottle neck engagement clip including a semi-flexible generally U-shaped arcuate bottle neck engagement section and a lid mount section and a bottle cover lid pivotably mounted on the lid mount section above the bottle neck engagement clip. The bottle neck engagement section of the bottle neck engagement clip includes left and right curved arms operative to be flexed outwards from one another to fit around a bottle neck and to flex towards one another upon being released to frictionally engage a bottle neck thereby frictionally supporting the bottle neck engagement clip on a bottle neck. Finally, the bottle cover lid is pivotable between a covering position to cover a top opening in a bottle and an open position pivoted upwards and outwards from the bottle neck engagement section such that a top opening in a bottle is accessible.
